

# **OUR JOURNEY OF INTERNATIONAL DIMENSION IN SCHOOL (IDS)**

## **AGRICULTURE ..... I FARM; YOU EAT**

### **ACTIVITY 2: Visit to Organic Farm and Article Writing**

Participating Class(es): XI

To explore the problem of environmental degradation and understand the essential difference between organic and conventional system of agriculture children of std XI were taken for a virtual visit to an Organic Farm of Jaipur. They learnt about the ecological benefits of organic farming through this virtual event, they also understood how Organic Farming is an effective way to reduce the environment impact of dietary choice. They understood how organic farming is better as opposed to the formulaic approach of chemical farming and crops grown this way are healthier as they are chemical free and maintain soil fertility.

An online Article Writing activity was then conducted for students. They were apprised with the format, style and structure of an article and were also acquainted with the words and phrases that could be used to present persuasive ideas. A brain storming session was held along with a Power Point Presentation. During the session, students were made aware of various agricultural practices adopted by the countries stated above. A discussion was held on how the age of industrialisation, urbanisation and intensive use of chemical fertilizers and pesticides has raised stern questions about sustainable use of soil and various farming approaches. Students were asked to do a research on the same. The session helped students understand the topic, gather information and think critically.

After having understood the concept of writing articles they were then asked to draft one on the topic- "Is Organic Farming Better than Conventional Agriculture?"
